

# SAFECLAMP® Handrail Systems

## DATASHEET

Step on Safety

## Modular Handrail System

The Fibreglass tube can be quickly cut to length on-site to make the stanchion, handrail and mid-rails with the matched pairs of moulded fittings clamping around the tube to complete all the joints.

The fittings are mechanically fixed to the tube with an A2 Socket-head bolt & Blind Riv-Nut.

This special nut and bolt combination ensures that both the bolt head and the nut are recessed within the moulded fitting retaining the smooth surface for safe uninterrupted hand hold and no snagging on clothing.

For additional security the fittings can also be adhesive bonded using single or two pack adhesives.

Safeclamp® is available in yellow colour as standard. Grey is available upon request.

### BENEFITS

- Lightweight
- Easy to install
- BS Compliant (BS7818:1995)
- Durable
- Corrosion resistant
- Colourfast
- Warm to touch
- Non-Conductive

Safeclamp® is a modern composite alternative to conventional galvanised Key-clamp style handrail systems. Manufactured from Glass-Reinforced Plastic (GRP).

The Safeclamp® modular system is based on a 50mm Diameter Pultruded tube, 5mm thick for real strength and toughness and joined together by a range of specifically designed GRP moulded fittings to create the complete handrail system.
