Step on Safety

Ergonomic Handrail System

Our SafeRail™ Ergonomic Handrail System is our premium alternative to the modular Handrail System. It is pre-manufactured in house to suit your exact site requirements, and shipped to site for simple installation.

The Decksafe Solutions Ergonomic Handrail System comprises 50 x 50mm Square Box Section stanchions, a 38mm diameter Mid-Rail and an ergonomic Top Rail, along with an optional kick-plate system and infill mesh.

All components are manufactured from pultruded fibreglass structural profiles, with a superior surface veil to improve aesthetics.

The handrail system is ideally suited for industrial and commercial applications, particularly in harsh environments where its corrosion resistance allows it to out-perform conventional galvanised steel equivalents.

The non-metallic finish ensures that it is warm to touch, non-conductive and, due to its complete pigmentation throughout, does not require painting or powder-coating.

All handrail components are joined via stainless steel rivets, screws or bolts and the complete system is easily installed on-site.

Benefits:

- Lightweight
- Non-Conductive
- Durable
- Fire Retardant
- Colourfast Yellow or Grey
- Easy to install
- Ideal for larger installations
- Warm to the touch
- BS Compliant BS7818:1985 (0.84 k/N)
- Corrosion resistant
- Supplied as components or in pre-built sections
